

Integrated Care Management

- Single Unified Platform for Resident Safety and Security
- Resident Location
- Event Classification
- Email and Text Message Alerts
- Two-Way Voice Communications
- Data Capture and Reporting

Your Safety & Security Needs are Covered - Experience the Code Alert® Benefit

Introducing Code Alert® Integrated Care Management, a fully integrated suite of wireless safety and security solutions designed to rapidly notify caregivers of events that could result in resident injury. Unique to the industry, Code Alert Integrated Care Management succeeds in combining many safety and security solutions including:

- Wandering Management**
- Wireless Call**
- Fall Management**
- Remote Event Notification**
- Data Capture and Reporting**

For more information call a representative at 800-669-9946, or visit us at www.rft.com.

Proven. Tested. Certified.

Code Alert® Integrated Care Solutions fully conform to the UL 1069 Standard for hospital signalling and nurse call equipment, and the UL 294 Standard for access control systems.

RF Technologies Leads with 20 Years of Experience Designing & Delivering Innovative & Customizable RFID Solutions to the Healthcare Industry

CODE ALERT®
Senior Living Safety Solutions

Integrated Care Management

Code Alert® Wandering Management

The Code Alert Wandering Management Solution provides notification of an attempted elopement. This system utilizes a transmitter worn around the wrist that continuously sends out a signal to identify the resident; when the resident tries to open a system controlled door, an alarm is sounded at the door and at a remote PC, which can also immediately relay the signal to a variety of remote event notification devices so caregivers can respond before an elopement event occurs.

Code Alert® Wireless Call

The Code Alert Wireless Call Solution allows residents to alert caregivers that they need assistance wherever they happen to be inside of the facility. A mobile call pendant with an alert button can be worn, and if pressed, the central server sounds an alert to notify the caregiver. Fixed call stations such as Nurse Call Cords and Pull Cord Stations can also easily be integrated into the system. Here again, the resident's name and location can be sent to a variety of remote communications devices to allow for immediate response.

Code Alert® Fall Management and Incontinence Detection

The Code Alert Advanced 4-Way Care Solution notifies caregivers when a resident is at risk of falling, when an incontinence event has occurred, when the resident calls for assistance, or when a resident needs to be repositioned. This solution helps reduce the risk of falls, related injuries, and pressure ulcers by sending an alert to the Integrated Care Management System, which can then be immediately sent to a mobile caregiver to allow for the quickest possible response time.

Code Alert® Remote Event Notification

The Code Alert Integrated Care Management software can send immediate system alerts to a variety of fully integrated remote event notification devices including QuickLook™ LED displays, the Care Manager™ two-way pager, and many phone systems in use by facilities today, including Spectralink, Avaya, and Cisco. The software can also send e-mails to any networked PC or text messages to any cell phone.

Voice-to-Voice and Point of Care Capture Capability

With the optional Code Alert Cisco® Messaging Interface and a Cisco Phone System, caregivers not only have quick access to remote event notification, but can also conduct hands free voice-to-voice communications with residents and classify events at the point of care. With just one touch on their handheld phone, caregivers can immediately speak with residents through the speaker on the nearest phone to ascertain the nature of the alert, and in case of an emergency, reassure them while sending help. When the caregiver arrives at the point of care, they can use the handheld phone to classify the cause of the request, allowing them to continue on with their activities without having to return to the central workstation.

Code Alert® Data Capture and Reporting

By combining all of RF Technologies' Code Alert systems onto a single platform, Code Alert Integrated Care Management allows for complete collection, analysis, and reporting of all data related to wandering, assistance requests, and fall events to be recorded and reported using the system software. These reports can be used to target care to specific individuals as well as improve the efficiency and quality of staff response.
