HOSPITAL SECURITY SOLUTIONS

RFT®

EMPOWER A SAFER WORLD

HOSPITAL SOLUTIONS

RFT's hospital security solutions help leaders reduce risk and create safer work and care environments, from labor and delivery units to parking structures. Our comprehensive suite of Staff Protection, Infant Protection, and Wander Management solutions deliver consistent, campus-wide coverage without disrupting clinical workflows. Built specifically for healthcare, RFT's patented technology supports safer care, a protected workforce, and greater confidence in hospital-wide safety operations.

STAFF PROTECTION

Uses a real-time locating system (RTLS) to locate staff in need of assistance. At the press of a button, the staff protection device immediately and discreetly report the individual's location to your security team, whether they are indoors, outdoors, or off-campus.

INFANT & PEDIATRIC SECURITY

Safe Place is easy and automated. The small, lightweight Smart Sense® transmitter is worn on an infant's ankle. Constant communication with alarming band receivers ensures that if a baby nears a monitored exit, doors lock, alarms sound, and staff are instantly notified—all via wireless technology.

ELOPEMENT & WANDER MANAGEMENT SOLUTIONS

If a patient wearing a transmitter approaches a monitored exit, a door antenna will recognize the transmitter and, depending on configuration, can sound an alarm, lock the door, and/or notify staff.

CLINICAL EDUCATION

Our clinical education team delivers concise, flexible training for nurses and administrators via web-based learning, realistic product simulations, and targeted go-live support, complemented by hands-on, at-the-elbow training with nurses on site—all aligned with your organization's security and remote-access policies.

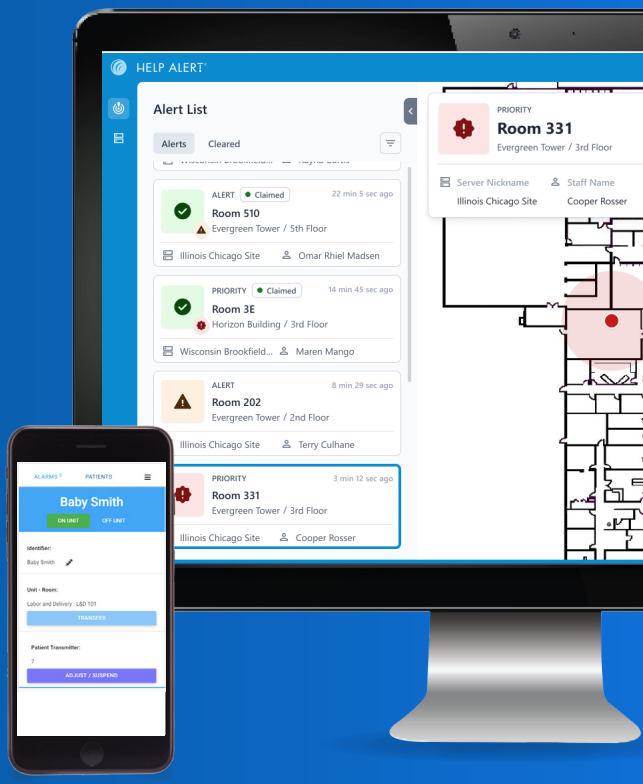
ENTERPRISE & HELP ALERT SOFTWARE

Safe Place Enterprise software integrates patient care and staff workflow on a single platform. The software application provides your staff the ability to connect from anywhere. The interface allows access via your facility's secure web connection.

Staff can respond to alarms on their mobile devices. **The ability to** view alerts, coordinate care and classify events improves workflow efficiency. In addition, the app eliminates the need for dedicated work stations.

When using the mobile client, the frequency **of alerts and how** they are displayed are dependent upon your facility's infrastructure.

The Help Alert Staff Protection software offers a flexible, browser-based system with an admin dashboard for real-time system health and reporting. It also supports integration with various third-party tools to enhance workplace safety, now including lone worker coverage.



Touchpad Exit Controller (TEC)
Triggers an exit's lock and used to bypass or silence alarms; the LED touchpad illuminates when pressed, and turns off when inactive

Transmitters
Patented tags worn on infant's ankle; secured with soft, comfortable banding; communicates with ABRs and antennas; water-resistant

Alarming Band Receiver (ABR)
Transmitters "check in" with ABRs every 10 seconds

Staff Protection
When activated, security is discreetly notified, so help can be dispatched immediately

SERVICE & PROTECTION PLANS

RF Technologies offers three levels of Protection Plans to meet your specific system and service needs. Plans are available in one- to five-year packages, offering extended hours of coverage:

- **Basic:** Base-level package with functional inspection service
- **Extended:** Best for facilities with in-house maintenance staff
- **Complete:** Complete suite of services with full parts and labor coverage

All of our plans come with our after-hours Level 2 technical phone support, available 24/7/365.

By bundling one of our world-class plans with our expert services and our guaranteed response, you can be confident your system can achieve your security, performance, safety, and budget goals.

Protection Plan Benefits	Basic	Extended	Complete
