**RF Technologies® Installs Safe Place® Solution for Infant Security at
Ocean Medical Center**

Helps increase security unit-wide; tracking features cited

Brookfield, Wis., September 28, 2009 – RF Technologies®, a leading provider of radio frequency identification monitoring systems and healthcare security solutions, has partnered with Ocean Medical Center of Brick, NJ, to help protect infant patients with the recent installation of Safe Place® Infant and Pediatric Security Solution. The hospital chose the system because of its ability to track babies throughout its infant unit, sound an alarm and automatically lock all doors in the event of an attempted abduction.

“We selected Safe Place as the best choice to update our security system because of its tracking feature, ease of installation and user-friendly qualities,” said Karen Dademo, Nurse Manager for Maternal Child Services at Ocean Medical Center. “We also received a strong recommendation for Safe Place from nurses and administrators at our sister hospital, Riverview Medical Center, who have been very pleased with the system.”

Ocean Medical Center installed the Safe Place solution to replace its RF Technologies’ Code Alert system in the infant unit. The Safe Place solution satisfies the security needs of the center, which delivers approximately 1,200 babies annually.

“We are pleased that our Safe Place Infant Security Solution meets Ocean Medical Center’s needs for a cost-effective system that supports its infant unit,” said Keith Koby, Executive Vice President at RF Technologies. “It is gratifying that our product will play a key role in helping to safeguard the infants the medical center services each year.”

RF Technologies completed the two-week installation July 26. The company installed a computer and the latest version of Safe Place software so staff can easily interact with the system, and interface with all doors in the unit so they can be locked the instant the alarm is activated. In addition, any attempt to tamper with the system wiring or infant transmitters by unauthorized personnel will send an alert to the monitoring system.

“The installation was 100 percent seamless,” Ocean Medical Center’s Dademo explained. “There was no interruption in our services, and the installers were quiet and completely respectful of our medical staff. We couldn’t have asked for anything better.”

On-going training, strong tech support enforce system capabilities

RF Technologies provided on-site clinical education, through a registered nurse, on Safe Place for one full week. This ensured that internal staff trainers were well-versed, and provided a follow-up refresher course 60 days after the initial training session. Practice abduction drills have taken place and will be conducted quarterly so that the staff maintains its familiarity with the system.

About RF Technologies

RF Technologies is a leading provider of comprehensive, integrated RFID Safety and Security systems, Wi-Fi RTLS systems, and healthcare enterprise solutions. With an installed base of more than 10,000 systems worldwide, RF Technologies specializes in state-of-the-art healthcare solutions for senior care facilities and hospitals, including Code Alert® Wandering Management, Wireless Call and Fall Management Solutions, Safe Place® ED and Infant Security Solutions, and PinPoint® RTLS Location-Aware Solutions. The company is credited with inventing the first RFID infant security system, which was designed and developed by nurse clinicians. It was the first in the industry to invent Peer-to-Peer Wi-Fi RTLS, and to offer Remote Monitoring, RF Consulting and 24X7 technical support by RF Technologies' staff specialists and a nationwide service management team. www.rft.com
