

## Infant/Child Security

- Reduce the Risk of Abduction
- Scaled to Meet Facility Needs
- Cut Band Technology
- Mother-Baby Matching
- Integrated Badge Access
- Global Lockdown
- Elevator Deactivation
- JCAHO Activity Reports
- Patient Census Whiteboard

### Maximum Security with Workflow Enhancement

Safe Place® protects infants in your care within a defined area, and is customized to each hospital's needs. As soon as the nurse attaches the small, lightweight transmitter onto the infant's ankle, the system provides immediate and comprehensive security. Safe Place is designed for and by clinical nurses to be user-friendly and improve staff productivity. The technology increases efficiencies by centralizing information on a touch screen PC monitor, allowing for easy admit with an auto-enroll feature, and conveniently identifying and registering nurses into the system with card swipe and proximity readers. Safe Place is a fully supervised system using cut-band technology with RFID transmitters that check into the system every 10 seconds, to ensure every transmitter has the appropriate battery levels, and is operating optimally 24/7.

### Whiteboard Feature with Census Information

The SafePlace whiteboard feature allows you to see your census, and identify the location of patients and equipment at a glance. The whiteboard feature also enables you to note patients who are considered high risk, and assures you that all infants are named in the system.

### JCAHO Reporting Functionality

To be assured your hospital accreditation is secure, Safe Place allows you to generate a variety of customized reports to track infants and "system-use" activities that reflect the most current status. These reports have been developed to help you reduce alarms and be ready for JCAHO at the touch of a button. Some of these reports include Alarm Trending, Infant Census, Alarm Activities, Bookend Reporting, Adjusted Bands, Transport History, Discharged Infants, and Abduction Drill Reports.
