Introducing new HELP ALERT with Mass Notification capability.

Keep your staff informed, when they absolutely need to know that a serious and/or life threatening situation is happening.

Help is on the way—Real-Time Location Accuracy that leverages your existing Wi-Fi infrastructure.

The potential for violence in today's hospital setting is all too real. You need to protect your staff and give them peace of mind that help can be on the way at the touch of a button.

Mass Notification Without a Smartphone

Allows you to notify your employees of an emergency without requiring them to be carrying a smartphone.

Does Not Require an Internet or Cellular Connection

In the event of an emergency, public networks might be the first thing to go down.

Quickly Know Where All of Your Employees are When an Emergency Occurs

When a mass notification signal is triggered, all active alarm fobs report their location.

Automated or Security Initiated Alerting

Can be set up to trigger an emergency alert directly from an observing employee.
