

HELP ALERT!®

Wireless Panic Alert System

Mobile Panic Alarm

Today, the threat of workplace violence is greater than at any other time.

Tragically, violence in public settings, such as schools, hospitals and hotels, has become all too commonplace. With the HELP ALERT® Wireless Panic Alert System, you can give employees peace of mind that, if they need it, help is on the way at the touch of a button.

Leverage Your Existing Wi-Fi

The HELP ALERT system can be easily installed using any existing Wi-Fi infrastructure, without having to add Wi-Fi access points.

- Quick, convenient and cost-effective installation: no power or data cabling required
- Uses small, battery-powered locator beacons, attached out of the way on walls or ceilings
- Fully-supervised system
- Scalable: easily expand the system as needed

Simple, efficient software = Fast response!

Mobile panic alarms enable security teams to locate staff even if they're on the move, unlike fixed panic buttons or repeater-based systems.

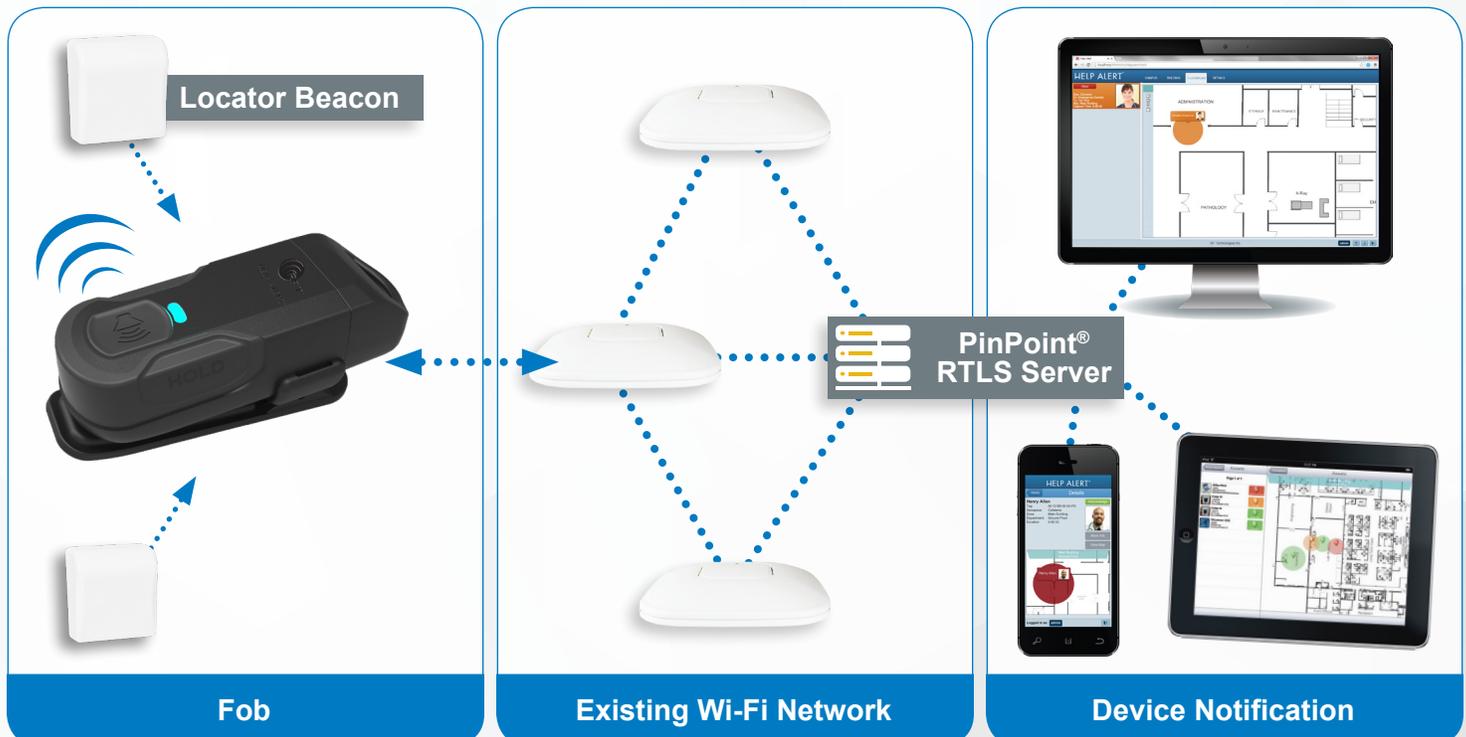

Once an alarm is activated, system software enables detailed location tracking via security monitors and mobile devices, allowing security staff to intervene before a situation escalates to violence.

- View alerts in real time: watch the pendant's location continuously update on a floor plan
- Immediately acknowledge alarms, even while responding to the incident

Use Software Data to Predict Behavior & Prevent Violence

Software captures alert history and data, enabling review and analysis.

- Plan and predict where or when alarms are more likely to occur
- Track the response times of your security teams for continuous improvement
- Spot overall trends to help you budget or re-allocate security
- Pull stored data for use in quality reporting

Rapid Response: When a HELP ALERT fob is activated, location information is collected from the Wi-Fi network and Locator Beacons, then passed through a server to all security-monitoring computers and available mobile devices – all within seconds.

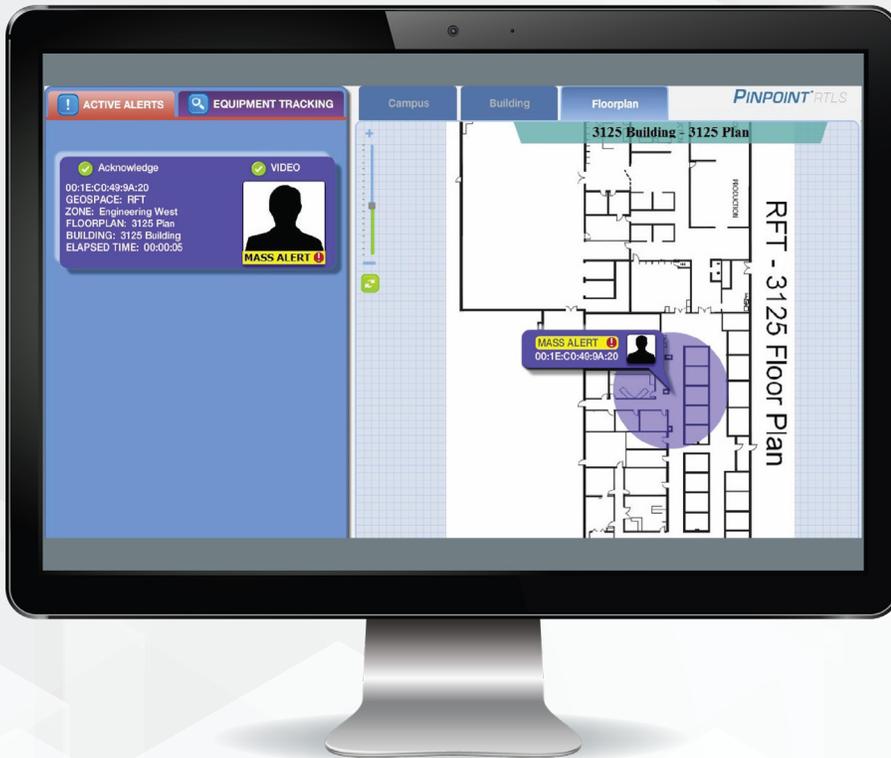

Introducing HELP ALERT with Mass Notification feature.

Keep your staff informed, when they absolutely need to know that a serious and/or life threatening situation is happening.

A Secure Environment is Good for Business

By reducing the risk of a physical threat, HELP ALERT creates a secure, productive work environment allowing staff to focus on the work they've been hired to do.

- Enhance job satisfaction and help retain employees
- Avoid negative publicity from violent incidents
- Leverage other security investments – if a pendant is activated, responders can use mass notification options and video surveillance systems already in place to assess the alert

Help at Your Fingertips

HELP ALERT uses a real-time locating system (RTLS) to immediately locate staff in need of assistance. At the press of a button, HELP ALERT immediately and discreetly reports the individual's location to your security team.

- Enables a fast response when it's needed most
- Can be activated anywhere, including areas video systems cannot capture
- Multiple wear options: fits in pocket, clips to belt or pocket, and attaches to ID lanyard

Pendant Clip

Key Ring

Lanyard

Belt Clip

Stay Secure, Long After Your Purchase

Protecting your investment is an important aspect of increasing the longevity of your HELP ALERT® system and keeping those inside your facility safe. An effective maintenance program:

- Lowers your total cost of ownership over time
- Optimizes system performance and reliability
- Reduces risk and reliability exposure
- Minimizes unbudgeted repair costs

Customized Services and Support

Protection plans are fully customizable to the needs of your facility. Add any of the services below to your plan for a tailored solution that meets your security, budget and system goals.

- Additional comprehensive inspections, performance, validation, and certification
- Automatic supply replenishment
- Secure remote connection
- Onsite user training
- Onsite maintenance training

Support When You Need It

HELP ALERT is there when you need it, and we're there when you need us. Direct, factory-trained support is available for all of our products.

- 24/7 technical phone support
- Remote monitoring and diagnostics enables us to quickly assess and correct performance issues through a secure VPN
- Installation support includes product manuals and training materials
- Regional onsite support and upgrade assistance
