

There When You Need It and Discreet When You Don't

The Touchpad Exit Controller (TEC) from RF Technologies has a responsive touchpad that provides the latest in discreet exit monitoring for infant and pediatric security.

- White LED backlight illuminates the touchpad when a digit is pressed
- Backlight turns off when not in use, helping the controller blend into your facility's surroundings
- Silence alarms or bypass the door by entering a code on a responsive touchpad – alarms are forwarded to a central computer station, and can be sent to pagers or mobile devices
- Full, 10-digit touchpad enables staff to create a more secure code that's more difficult for unauthorized persons to learn or guess

Safe and Secure Operation

The Safe Place® Infant and Pediatric Solution reduces the risk of patient abductions and related liabilities through safe and reliable exit monitoring for patients wearing small, lightweight transmitters. The TEC can be used with our infant, pediatric and elopement management solutions.

- Configure a customized, scalable solution that considers staff efficiency and workflow
- Integrate multiple security solutions into one platform for cost-effective, efficient operations
- Continued support is available after installation, including access to regional installers and service experts

Features

- Create a safe and secure environment
- Discreet appearance
- Responsive, 10-digit touchpad
- A central component of transmitter-based security or continuous perimeter monitoring
- Use with our Safe Place Infant, Pediatric or Elopement Management Solutions

The Safe Place Infant & Pediatric Security Solution is certified to the UL 294 Standard for Access Control Systems.
