

Complies With NFPA Codes

CodeLock™ door locking mechanisms comply with the National Fire Protection Agency's (NFPA) safety guidelines for delayed egress.

- Exit points automatically unlock in the event of a fire alarm
- Nuisance timer enables one to two seconds of pressure to be applied to a door before alarm sounds

Who is RF Technologies?

RF Technologies has been designing and delivering radio frequency identification (RFID) safety and security solutions for the senior living and healthcare markets since 1987. Learn more about us at www.rft.com.

Discreet, Dignified Wandering Management

Since 1987, RF Technologies has designed and delivered innovative and customizable RFID security solutions to the healthcare industry.

Transmitters

Residents will wear a CodeWatch® transmitter with a latex-free band around their wrist or ankle.

**Transmitter not a working watch.*

Our commitment to resident safety

A secure environment is crucial to residents and their families. If your loved one is at risk of wandering, you want a solution that provides discreet, restraint-free protection and peace of mind. That's why this community has installed the **Code Alert® Wandering Management Solution from RF Technologies.**

- Radio frequency identification (RFID) transmitters preserve residents' dignity and promote freedom and independence
- Transmitters are water-resistant for use in the shower
- Caregivers are instantly notified of an attempted elopement or if a resident is lingering* near an exit – notifications are sent to phones, pagers and computers for a fast response.

**Optional feature.*

Why a wandering management system?

A wandering management system safely monitors residents at risk of elopement while promoting mobility and a home-like environment.

What if a device isn't working properly?

The system will send an alert to caregivers if there is a device failure or low battery.

Will the system interfere with other frequently used electronic devices?

The system will not interfere with Wi-Fi, TVs, cell phones or pacemakers.

Do transmitters track residents' movement?

No. None of the devices track a resident's every move. The resident's location is only reported if a transmitter's signal is detected near a monitored exit.

How does it work?

1 Residents wear small transmitters on their wrist or ankle that communicate with antennas mounted near locked exits.

2 Caregivers are instantly notified if an attempt is made to open a locked door, or if a resident is lingering near a locked exit.
