

Features

- Create a safe, home-like senior living environment
- Discreet appearance
- Responsive 10-digit touchpad
- A central component of transmitter-based security or continuous perimeter monitoring
- Multiple models available

There When You Need It and Discreet When You Don't

The Touchpad Exit Controller (TEC) from RF Technologies has a responsive touchpad that provides the latest in discreet exit monitoring for wander management.

- White LED backlight illuminates the touchpad when a digit is pressed
- Backlight turns off when not in use, helping the controller blend into your community's surroundings
- Silence alarms or bypass the door by entering a code on a responsive touchpad – alarms are forwarded to a central computer station, and can be sent to pagers or mobile devices
- Full 10-digit touchpad enables staff to create a more secure code that is more difficult for residents to learn or guess
- Available in three models to suit the needs of your community

Safe and Secure Operation

The CODE ALERT® Wander Management Solution reduces the risk of resident elopements and related liabilities. Through continuous perimeter monitoring or transmitter-based security for residents wearing small, lightweight transmitters, the solution helps promote mobility and a home-like environment.

- Configure a customized, scalable solution that considers staff efficiency and workflow
- Integrate multiple security solutions into one platform for cost-effective, efficient operations
- Continued support is available after installation, including access to regional installers and service experts

The CODE ALERT Wander Management Solution is certified to the UL 294 Standard for Access Control Systems.
