**Do you know
where your
equipment is
when you
need it?**

Immediate help is
now within your reach.

MOBILE ASSET MANAGEMENT MADE EASY.

EASY TO USE

Individual asset identification

Each ExacTrack Wi-Fi Asset Tag is assigned a unique identification code, description and keywords, which enable system users to instantly locate a specific asset at any given time.

Instantly determine status

ExacTrack can tell you whether a specific asset is currently available, in use, or out of service. Knowing asset status before you go looking for an item can greatly enhance staff productivity.

Easy to understand interface

Clearly identifiable floor plans and asset icons help you locate specific assets quickly and easily. Our layered display capability lets you see a broader campus view in addition to a more granular level, providing the orientation needed to expedite asset location in larger facilities.

EASY TO IMPLEMENT

Totally scalable

Introduce ExacTrack in those areas where it's the most difficult to keep track of mobile assets. Or, cover your entire enterprise from the start to maximize your asset management capabilities.

Leverage existing Wi-Fi

Powered by the advanced PinPoint RTLS (real time location system) platform, the system can be easily deployed using any existing Wi-Fi infrastructure... without having to add additional Wi-Fi access points.

Convenient and cost-effective

Because ExacTrack can utilize your existing Wi-Fi network, no power or data cabling is required. ExacTrack can be deployed simply by attaching battery-powered reference tags to walls or ceilings and placing individually assigned Asset Tags on the corresponding equipment. This set-it-and-forget-it approach provides an effective implementation for a fraction of the cost of traditional peer-to-peer location-based alternatives.

EASY TO APPRECIATE

Enhanced workflow

Staff can spend an alarmingly high percentage of their time simply searching for the equipment they need. Being able to quickly locate where equipment is when it's needed, enables once wasted time to be reallocated to more productive, mission-critical pursuits.

Increased utilization

The sooner you can locate equipment, the more use you get out of it. In addition, immediate location of equipment makes it easier to perform preventive maintenance and upgrades, improving the productivity of your support staff as well as the ROI on your mobile assets.

EASY TO LEVERAGE

Run Help Alert® application on the same platform

Help Alert is a wireless staff duress solution that enables personnel to move throughout your enterprise with greater confidence.

Put help at your fingertips

The Help Alert pendant can be worn on a lanyard, clipped to a belt or kept in a pocket, so it's always there when staff members need it.

Transmit discreet alerts

With the touch of a button, the pendant sends a wireless distress call to staff and security teams.

Ensure a more rapid response

Because detailed location information and staff member identification can be clearly displayed on security monitors and optional handheld devices, help can get where it's needed as efficiently as possible. In many instances, in time to preempt situations before they escalate to violence.

To find out how easy it is to realize the benefits of ExacTrack and Help Alert, visit www.rft.com or call 800-669-9946.
