STAFF DURESS PENDANT

The pendant is the smallest Long Range Bluetooth® Low Energy staff protection solution on the market. The compact and sleek design allows users to discreetly call for assistance and to be located within their facility without alarming others.

It features a durable casing which enables coverage from parking lots to patient rooms, LED lights and vibrations that provide tactile and visual feedback to the users so they know that help is on the way, and an easily replaceable battery that eliminates the need to completely replace the device once the battery dies.

One press of a button sends a wireless signal to the HELP ALERT software system then silently provides location information so security staff can track the user's location in real time.
