

CODE ALERT®

WANDER MANAGEMENT

Code Alert® Wander Management helps protect residents while preserving independence and dignity. Discreet transmitters detect activity near monitored exits, triggering alerts and optional door locking to help prevent wandering and elopement. Real-time notifications, room-level location, comprehensive reporting, and seamless integration support a safer, more secure environment.

CODEWATCH®

Discreet, Watch-Like Design

Comfortable wrist-worn transmitters help preserve resident dignity while blending naturally into daily life.

Promotes Independence

Enables residents to move freely throughout the community while providing reliable protection.

Water-Resistant & Durable

Designed for everyday use, including showering and bathing, for continuous protection and peace of mind.

Tamper-Deterring Protection

Secure banding options help improve compliance and ensure residents remain protected.

Multiple Design Options

CodeWatch comes in three stylish face and band combinations.

THE IMPACT

100 residents have died from wandering away from facilities since 2018.

In the past decade, more than 2000 people have wandered away from assisted living and dementia care units or have been left unattended outside.

The average cost of a fatal elopement death lawsuit is \$350,000.

HOW IT WORKS

1.

Transmitter

A resident wearing a transmitter approaches a monitored exit.

2.

Monitored Door

Antennas pick up the transmitter signal and the CodeLock™ locks the door.

3.

Touchpad Exit Controller

If a resident tries to open the door, the visual & audible TEC alarm sounds.

ENTERPRISE SOFTWARE

RF Technologies' Enterprise Wander Management software provides a centralized platform for monitoring resident safety, managing alarms, and improving caregiver response across a community. Through the Enterprise platform, staff can receive and prioritize wander alerts, view resident activity in real time, access event history, monitor near-door and exit activity, and use reporting tools to identify trends and reduce elopement risk. The software integrates with transmitters, monitored exits, touchpad exit controllers, mobile devices, and other resident safety systems to create a unified workflow that improves visibility and accountability.

- CareConnect® extends alerts directly to caregivers' smartphones for faster response.
- Dashboards provide insights into response times, resident behaviors, and system performance.
- A scalable, browser-based platform supports data-driven decisions, streamlined operations, and a secure, home-like environment.
